Will do. Sam has started the rad protection plan. I'm populating it with info. Will add the RemBall. Should be ready early next week.

Yep, figured that.

And in the plan, add that we will do a survey with the remball model 12-4 to confirm that there are not neutrons from the possibility of a Radium-Beryllium source. And just in case, grab a Beryllium MSDS. If it is there, its nasty enough that people need to be aware right away --- toxicity not rad.

That was cut and pasted out of Fansteel, so you're correct with the Radium vs. thorium.

That is what I was talking about. I assume that we would look for radium rather than thorium. However, with the daughters involved, its what the experts say.

Sam had suggested a program similar to Fansteel:

1.1.1 Air Monitoring

Air monitoring for radiological activity will be conducted during work activities. RAdCO H-810 High-Volume Air Samplers will be utilized to collect air samples from selected locations representative of work areas. Air samplers should collect a minimum of approximately 14,000 liters in order to reach 10% of the Derived Air Concentration (DAC) for thorium-232. Th-232 is the most stringent DAC of the five radionuclides of concern at the site.

Air sample filters will be counted on a Ludlum 3030 sample counter or equivalent for gross alpha and beta activity. Background and sample count times will be determined in order to reach a minimum detectable activity of no more than 10% of the most stringent DAC for the site. If radioactivity is detected on a filter, the filter will be recounted each day on the Ludlum 3030 until radioactivity is no longer detected to determine whether elevated activity is the result of radon progeny. A final analysis of the filter will occur no less than 96 hours after sample collection to allow for sufficient decay of radon progeny.

I'm thinking we may need to add some lo-vol sampling on the perimeters. We should be able to read it with the 30-30s or 29-29s. See what Sam says.

Do you need anything from us? We can put together our workplan that will outline the perimeter air sampling and day to day H&S requirements. Was going to have ARS provide if they were going to sub, he said they already had one drafted.

Ok.

Did you get the message that the call is now 9:45?

FYI, Greg Lord with ARS just called and said they didn't have people for the proposed schedule, so we'll provide personnel.
